

BenneKaffi Self-Ordering System

Complete User Guide & Flow Walkthrough

Staff & owner reference

1. Overview

This system lets guests order from their phone by scanning a table QR code, while your staff manage the menu, orders, kitchen tickets and settings from an admin panel. It has three parts:

- Customer ordering (guest phones) - browse the menu, add to cart, place the order, pay at the counter.
- Admin panel (owner / manager) - menu, tables, orders, kitchen tickets, reports and settings.
- Kitchen (chef) screen - the live queue of items to cook and mark ready.

The sections below walk through every screen and the options on it.

2. Customer Ordering Flow

2.1 Landing page

The public home page shown at your website address. Guests can view the menu highlights, story, outlets and reach the ordering flow. All sections are editable from Admin > Landing Page.

The public landing page.

2.2 Start an order

Scanning a table's QR code opens the sign-in for that table. A guest table only needs a name; a numbered table asks for the PIN printed on its QR stand.

Welcome

Enter your table code and PIN to start ordering

Table code

PIN

Sign in

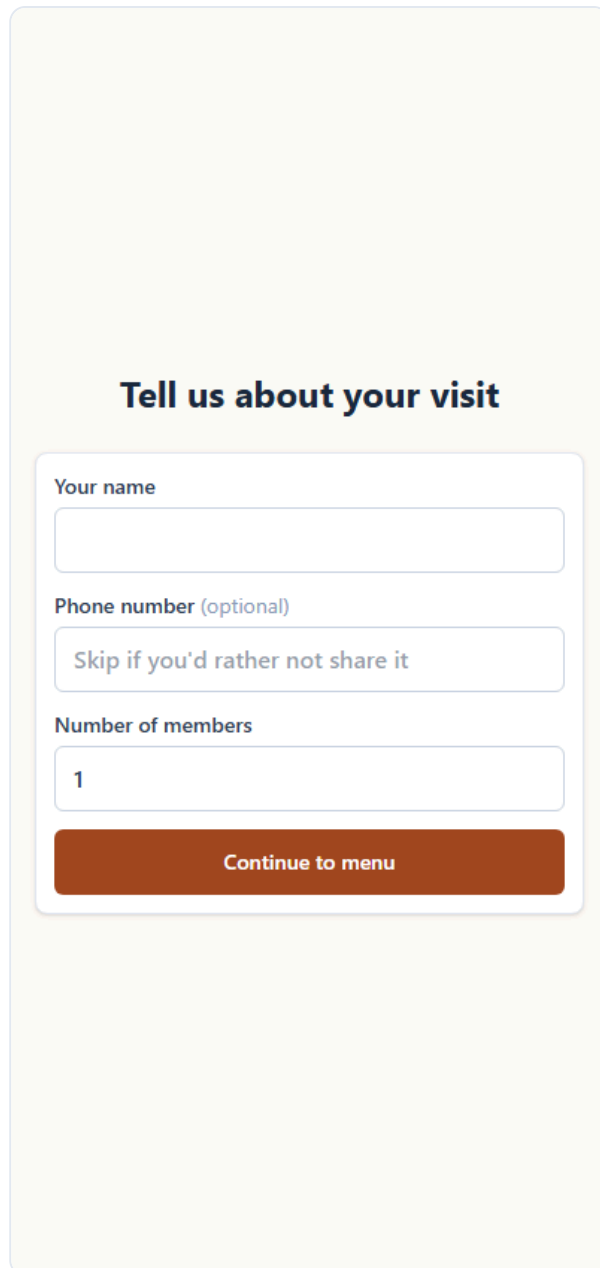

Available tables

tbl1tbl2tbl3tbl4tbl5

Table sign-in screen.

2.3 Enter your details

The guest enters their name (and optionally mobile number) and party size to start the order.

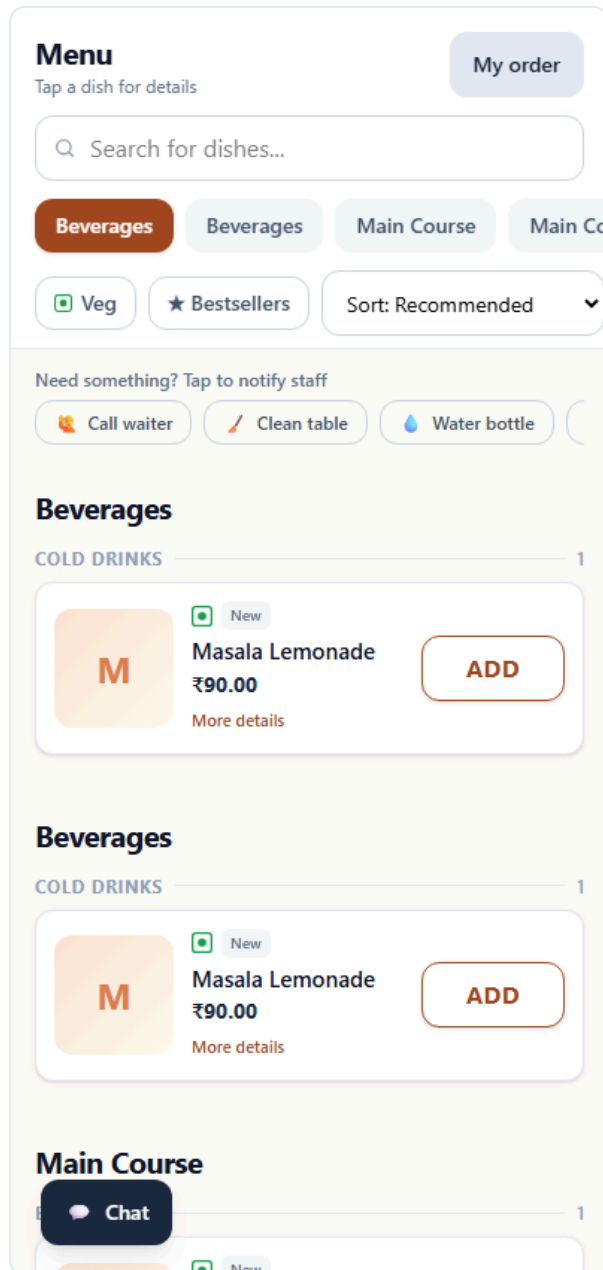

A mobile app screen with a light yellow background. At the top, the text "Tell us about your visit" is centered in a bold, dark blue font. Below this, there is a white rounded rectangle containing three input fields. The first field is labeled "Your name" and is empty. The second field is labeled "Phone number (optional)" and contains the text "Skip if you'd rather not share it". The third field is labeled "Number of members" and contains the number "1". At the bottom of the white rectangle is a dark brown button with the text "Continue to menu" in white.

Guest details screen.

2.4 Browse the menu

The menu is grouped by category with photos, veg / non-veg marks, ratings and bestseller tags.

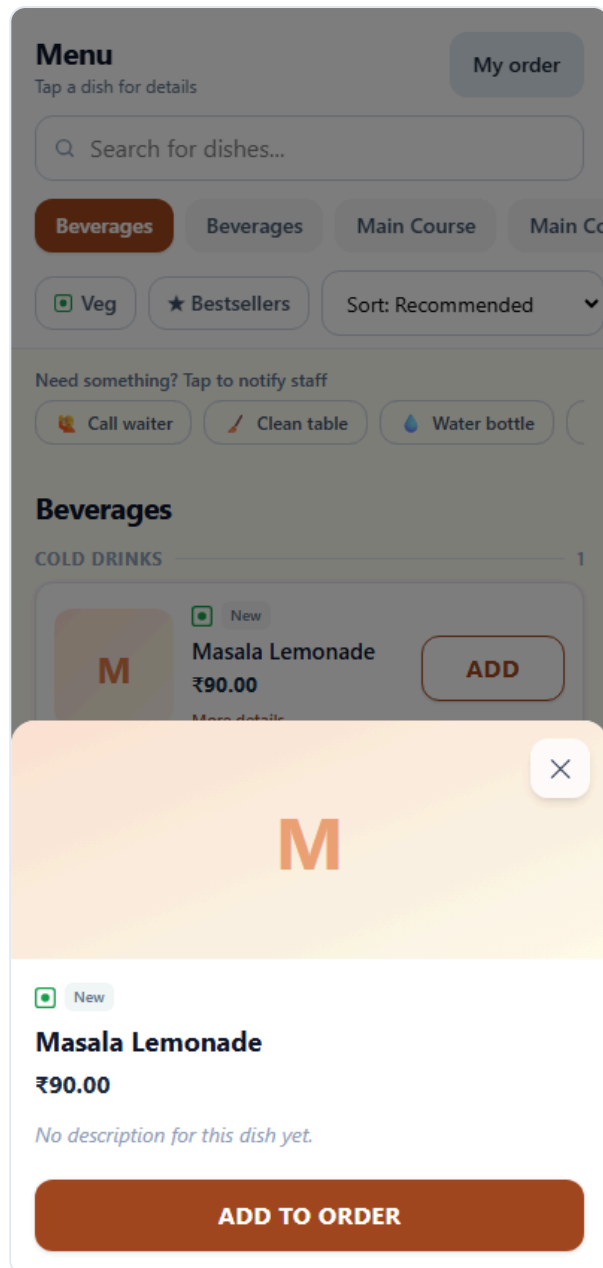

- Search - find a dish by name or description.
- Category tabs - jump to a section.
- Veg and Bestsellers filters, and a Sort control (price, name, bestsellers first).
- Quick requests - one tap to notify staff (call waiter, clean table, water, bill).
- ADD / the +/- stepper add items to the cart; the bottom bar shows the running total and 'Place order'.

The customer menu with photos and filters.

2.5 Dish details

Tapping a dish opens its full details with the photo, price and description, and an add control.

Dish detail popup.

2.6 Your order & checkout

After placing the order the guest sees a live bill with each item's status.

- Estimated ready time banner (configurable in Settings).
- Apply a coupon code.
- Order more, request checkout (staff are notified to take payment at the counter), or download the invoice.
- Chat with staff and leave feedback.

Checkout and your invoice unlock once all items are served - 1 still on the way.

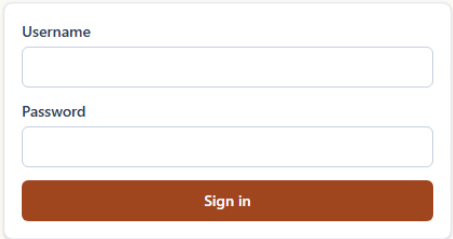

[Order more](#)[Checkout](#)[Download invoice](#)[★ Leave feedback](#)[Chat](#)

The guest's live order and checkout screen.

3. Admin Panel

3.1 Signing in

Open /admin and sign in with your admin username and password. Forgot-password uses your security answer.

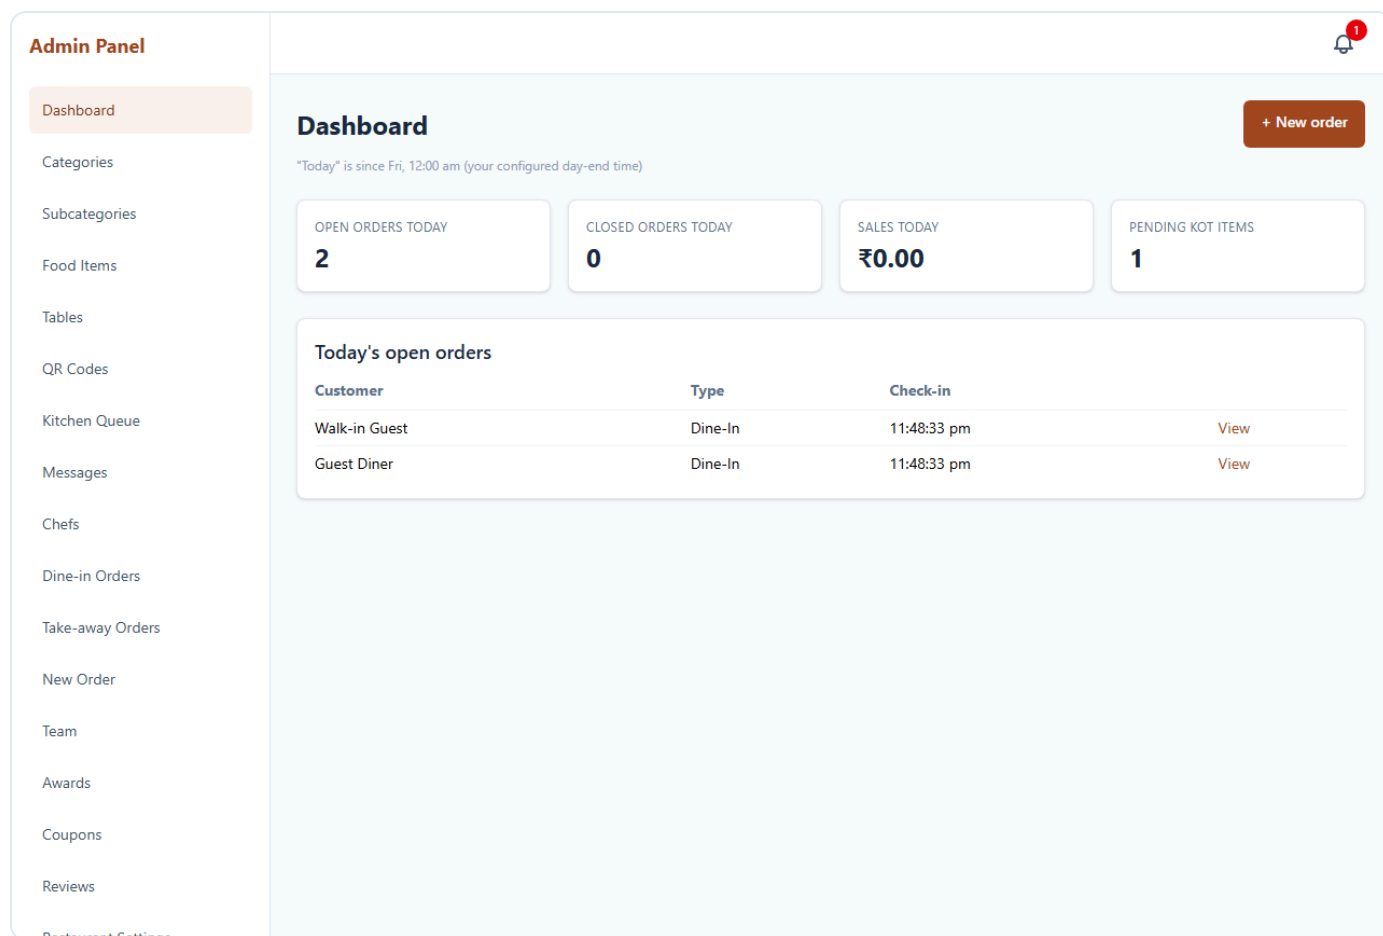

The image shows a screenshot of the Admin Login page. It features a light beige background. In the center, there is a white rectangular box with a thin grey border. Inside this box, the title "Admin Login" is centered at the top. Below the title, there are two input fields: "Username" and "Password". Each field has a small label above it and a white input area with a thin grey border. Below the "Password" field, there is a solid brown button with the text "Sign in" in white. Below the button, there is a link that says "Forgot password?" in a smaller, lighter font.

Admin sign-in.

3.2 Dashboard

The home screen after login shows today's figures and the open orders. The '+ New order' button starts a counter order directly.

- Open / closed orders today, sales today, pending kitchen items.
- 'Today' follows your configured day-end time and timezone (see Settings).

Admin dashboard.

3.3 Menu setup

Build the menu in three levels: Categories, Subcategories and Food Items.

Food items, with prep time and bestseller options.

3.4 Tables & QR codes

Manage every table and its QR sign-in.

- Add a table with a code and PIN; tick 'Guest table' for a shared walk-in / counter table.
- Auto-release after (minutes): a global default plus a per-table override (shown in hours/minutes). An abandoned occupied table frees itself and cancels any order it never sent to the kitchen.
- Per row: reset PIN, release, view KOT, delete, and an 'occupied since' indicator.

Tables

Auto-release after (minutes)

0

Save

If a table stays occupied longer than this, it is automatically freed and the guest's session ends. Set to 0 to disable auto-release. Any order the guest never sent to the kitchen is cancelled with the seating; counter orders and anything already sent are left alone. Individual tables can override this below.

Table code

PIN

e.g. tbl1

☐ Guest table

Add table

A guest table is for walk-ins and the counter: it is never marked occupied, so several people can order from it at once and it never has to be released. They only give their name and mobile number.

Code	PIN	Type	Expires after	Status	
doctbl	1234	Table	never never expires	min occupied occupied just now	Release Reset PIN View KOT Delete
tbl1	pass1	Table	never never expires	min available	Reset PIN View KOT Delete
tbl2	pass2	Table	never never expires	min available	Reset PIN View KOT Delete
tbl3	pass3	Table	never never expires	min available	Reset PIN View KOT Delete
tbl4	pass4	Table	never never expires	min available	Reset PIN View KOT Delete

Tables, with per-table expiry.

The QR Codes screen produces a printable QR for each table.

Table QR Codes

Each QR code encodes an encrypted, table-specific link (not the plain table code), so a scan takes the customer straight into ordering at that table - no PIN needed, since the encrypted code itself proves it's the physical stand. A PIN is still required if a customer types in a table code manually instead of scanning. Download and print for table stands.

You're viewing this on **http://localhost:5173**, so QR codes generated now will encode that address - a phone scanning them won't be able to reach it. Set a **Public URL** (your LAN IP or real domain) in [Restaurant Settings](#) first.

3.6 Kitchen tickets (KOT)

Kitchen tickets can be sent from the Order Detail's KOT section or from the Kitchen Queue.

- Send new items - prints the not-yet-sent items on a new ticket with a NEW token number.
- Reprint KOT - re-opens an already printed ticket using its ORIGINAL token; it never issues a new one.
- Take-away / delivery tickets print a 'PACK' instruction.

3.7 Orders & reports

Dine-in Orders and Take-away Orders list orders with filters by type, status and date. Yesterday / Today shortcuts and a From / To range all follow your business day-end time.

- Download CSV - a spreadsheet of the filtered orders with totals.
- Download PDF - a printable report; the file name includes the date.

3.11 Restaurant Settings

Central settings for the whole system:

- Name, logo, favicon, address, GST / FSSAI, public URL for QR codes.
- Day-end time - when the business day rolls over (keep 00:00 unless you trade past midnight).
- Timezone - the zone your business day and reports are measured in.
- Preparation time - a delay buffer and the ready-time message guests see.
- Chat abuse filter - on/off, mask or block, and your own banned words.
- Tax rates, and KOT / invoice print settings.

Restaurant name

FoodDrinks

Address

123 Main Street, Your City

Browser tab title

FoodDrinks

Shown on the browser tab and when someone bookmarks the site. Leave blank to use the restaurant name.

Favicon

Choose File No file chosen

The small icon on the browser tab. A square PNG around 64x64 works best.

Public URL (for QR codes)

e.g. <http://192.168.1.20:8080> or <https://your-domain.com>

The address customers' phones should use to reach this site - required if you're running this behind Docker/a LAN IP, since QR codes would otherwise encode whatever address you happen to be viewing the admin panel from (e.g. "localhost", which only works on this machine). Leave blank to use the current browser address automatically.

GST number

e.g. 22AAAAA0000A1Z5

FSSAI registration number

e.g. 12345678901234

Logo

Choose File No file chosen

or paste an image URL

Admin Users

Change Password

Logout

00:00

This is when one business day rolls over into the next - not your closing time. If you shut before midnight, leave it at 00:00 so each day matches the calendar. Only set it past midnight if you trade into the small hours: 02:00 means orders taken up to 2am still count toward the previous day's sales, dashboard, and Orders date filter.

Timezone

Asia/Kolkata

The zone your business day is measured in. Reports, the dashboard's "today", the Orders date filter and kitchen token numbers all use it, so it must match where the restaurant actually is - not where the server happens to run. Current local time here: 18/9/2026, 11:49:43 pm.

Preparation time

Delay buffer (minutes)

2

Message shown above the order items

Your order should be ready in about (minutes) minutes (around (time)).

Each dish carries its own prep time under Food Items; the slowest dish in a round plus this buffer sets when the order is due. Ordering more later pushes the estimate out, never forward. Use {minutes} for the wait still left and {time} for the clock time it should be ready. Clear the field to hide the message entirely.

Chat abuse filter

☒ Filter abusive and violent language in the guest ↔ staff chat

☒ Mask the words with *** (message still sends) ☐ Block the message entirely

Extra banned words (comma-separated)

e.g. local slurs to block, one per comma

A built-in list of common abusive and violent terms is always applied; add your own words above. Filtered messages are marked in the Messages screen so you can still see when something was caught.

Tax rates

CGST2.5Remove

SGST2.5Remove

Add tax rate

Preparation time and chat abuse filter settings.

3.12 Landing Page editor

Edit every section of the public landing page - hero banner (text, alignment, show/hide, images), what we serve, menu, story, outlets, reels, partnership and footer.

5. Good to know

- Business day & timezone: 'today', reports and kitchen token numbering all follow the day-end time and timezone set in Restaurant Settings - so set them to where the restaurant actually is.
- KOT tokens: a token is issued only when new items are sent to the kitchen; reprinting keeps the same token.
- Guest tables are shared and never lock, so several walk-ins can order from one at once.
